Save Energy, Save Money!

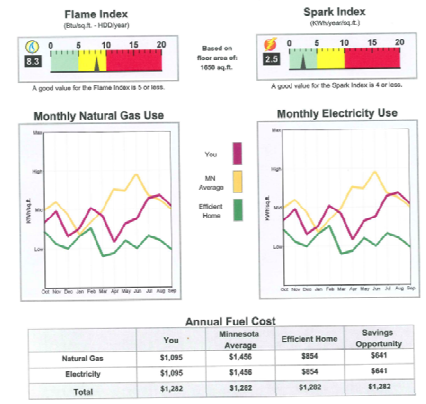

Your Guide to Energy Efficiency in Saint Paul

What is Neighborhood Energy Service?

Neighborhood organizations are teaming up to offer a residential energy efficiency program to Saint Paul residents. The first step is to attend a FREE workshop on saving energy and money in your home. Next, you schedule a home visit where the *Home Energy Squad* will install energy-saving materials for only a \$30 co-pay. Finally, we provide one year of personalized home energy reporting.

Energy Use Report

Learn quickly and easily how much your home is spending on energy and how your use compares to the average, same sized home in Minnesota. When you fill out an information release form, you will receive an energy use report for the past year at the home visit, and regular updates for the following year.

Home Visit

You will be able to schedule your home visit at one of our free energy workshops. The *Home Energy Squad* will come to your home to identify your home's energy needs and install the following materials to make it more efficient:

- Programmable Thermostat
- Compact Fluorescent Light Bulbs
- Low Flow Showerhead
- Faucet Aerator
- Hot Water Heater Blanket
- Door Weather Stripping

Great Value

Improving your home's energy efficiency can save you hundreds of dollars yearly. By attending one of our free workshops you'll qualify to receive the home visit with up to \$400 dollars worth of goods and services for only a \$30 co-pay. At the workshop you'll also receive our free "starter kit." This incredible opportunity is **only available** through our neighborhood workshops.
